

Programs and Projects Directorate (P)

The Programs and Projects Directorate is delegated the responsibility to:

- Manage the planning, development, implementation, and alignment of the aerospace programs and projects developed by the Center and/or assigned to the Center by the NASA Headquarters Mission Directorates.
- Formulate and advocate future programs, projects, plans, and Center alignment consistent with Agency strategies and Center capabilities through continuous collaboration with NASA Headquarters and other external customers.
- Establish and maintain partnerships with other NASA Centers, government agencies, industry, academia, and the community.
- Make aerospace programs and projects commitments to NASA Headquarters and other external customers on behalf of the Center.

Programs and Projects Directorate (P) con't

- Optimize, balance, and integrate requirements for application of Center resources to support program and project needs.
- Support the development of the strategic plan which sets out the Center's future goals and priorities in partnership with all Center organizations including the continued excellence and growth of GRC core competencies and capabilities.
- Provide formulation of system-level requirements and assessment of program-project-level progress using system and mission analysis approaches to support Center program/project decision making.
- Ensure that the directorate's workforce reflects programmatic changes and embraces the values of Safety, the NASA family, integrity, and excellence in all the activities required for achieving the programmatic goals.
